

Step 3: Create a style.css File for Your Hobby Website

This step ensures that all your pages have a consistent and appealing design.

1. Create the style.css File

1. In your project folder, create a new file named: style.css
2. Add the following code:

```
/* Basic styles for all pages */
```

```
body {  
    font-family: Arial, sans-serif;  
    margin: 20px;  
    line-height: 1.6;  
    background-color: #f4f4f4;  
    color: #333;  
}
```

```
/* Navigation menu styles */
```

```
nav a {  
    margin-right: 15px;  
    text-decoration: none;  
    color: #0077cc;  
}
```

```
nav a:hover {  
    text-decoration: underline;  
}
```

```
/* Headings */
```

```
h1, h2, h3 {  
    color: #222;  
}
```

```
/* Images */
```

```
img {  
    max-width: 100%;
```

```
height: auto;  
border-radius: 10px;  
}
```

2. Link style.css in Your HTML Pages

At the top of every HTML page (inside the <head> tag), add:

```
<link rel="stylesheet" href="style.css">
```

3. Tips

- You can change background-color and color to match your personal style.
- You can add more CSS for buttons, sections, or text effects later.
- Using one CSS file keeps your website organized and easy to update.
